SUBJECT: Automatic Programming Meeting

The Military Products Division has requested that a meeting be held to discuss the application of automatic programming techniques to the Sage system.

The meeting is scheduled for Wednesday, December 5th at 10:00 a.m. in Mr. H. S. Beattie's Conference Room. If you will be unable to attend or be represented, will you please inform this office.

The present Sage system is requiring a programming effort far greater than originally anticipated. One aspect of the meeting will be for KMPC to outline their present problem and present for discussion, some proposals for automatic programming. Along these lines, a discussion should also be held on how to determine how much of the problem lies with programming the computer, and how much with understanding the application. A discussion on whether the Sage programming problems are unique or common with EDPM machines should also be held.

The other aspect of the meeting will be to discuss the relation of automatic programming methods with the planning and development of new computing systems and what IBM's present program is in automatic programming.
