Mr. J. L. Scott

Subject and/or Reference: Endicott Film Printer

As a result of the meeting concerning possible applications on the Endicott Film Printer held in Dr. Miller's office on February 4th, I have come to the following conclusions concerning the potential applications for this machine within our area:

1. That although we do not have immediate use for this device we feel that our future planning includes some programs which might will lend themselves to display on such a device as the Endicott Film Printer.

2. That the use of the Film Printer for these applications would pose some problems due to the fact that we will be using a 305 RAMAC with punched card output and will have to make some conversion for compatible input to the Film Printer.

3. That in order to make these applications practicable, we will need some means of transmitting the microfilmed images via facsimile.

With the above considerations we would welcome an opportunity to use the Endicott Film Printer as an output device for 305 RAMAC applications in financial and administrative control.
