SUBJECT: Multi-Function (Dual Density) 729-II and 729-IV Tape Units

A meeting of DP Management personnel in White Plains on Thursday, March 26, 1959, resulted in the decision to proceed with plans for announcement of the subject tape units. These units will have the following characteristics:

Multi-Function 729-II

Speed--75 inches per second
200 characters per inch--15KC information rate
555.5 characters per inch--41.633 KC information rate

Multi-Function 729-IV

Speed--112.5 inches per second
200 characters per inch--22.5 KC information rate
555.5 characters per inch--62.5 KC information rate

Other features of these units will remain the same. However, a new instruction, "Set Density," will be required to select the density to be used with the selected tape unit. Mr. L. M. Audretsch can be contacted for further information on the resulting changes in TAU and the revised systems requirements.

It must be recognized that the minimum performance criteria for Multi-Function units operating at 200 characters per inch will be slightly lower than the criteria for present 200 character per inch tape units.

In addition, to provide improved reliability on the Multi-Function tape units and on all 7 track tape units now in the field as well as those to be shipped in the future, the following track reassignments will be made:

Present -- 1, 2, 4, 8, A, B, C

New -- 4, 1, 2, C, A, 8, B

Reliability and Serviceability will work with Customer Engineering to effect the necessary changes.

C. L. Christiansen
