February 6, 1958

Memorandum to: Mr. S. W. Dunwell

Subject: SIGMA Timing Simulator Studies

Enclosed is a File Memo concerning John Cocke's and my SIGMA timing Simulator studies. It contains the information I discussed at the meeting in your office last Tuesday, February 4th, plus some graphs of other parameter studies.

We are continuing our studies and hope to have more information in the near future on other configurations, particularly those concerning the use of special core memories for index registers.
