FILE MEMORANDUM

April 25, 1958

SUBJECT: Command and Field Length Distribution

The figures given below are the conclusions arrived at after discussions with some of the members of the 7000 planning group. They are a very general picture of the average distribution of commands and field lengths occurring in several typical programs for the Senior 7000 system.

I. Command classes

Floating Point	60%
Indexing and housekeeping	24%
Connectives	7%
Binary arithmetic	7%
Decimal	2% (perhaps less)

II. Distribution of arithmetic (% of fraction listed above)

	Binary	Decimal
Add Type	60%	65%
Multiply	30%	26%
Divide	10%	9%

III. Average field length

Binary - 24 bits, with a fairly flat distribution curve.

Decimal - 6 digits (24 bits). Not likely to be many very long fields.

It is emphasized that the above figures represent "educated guesses".
