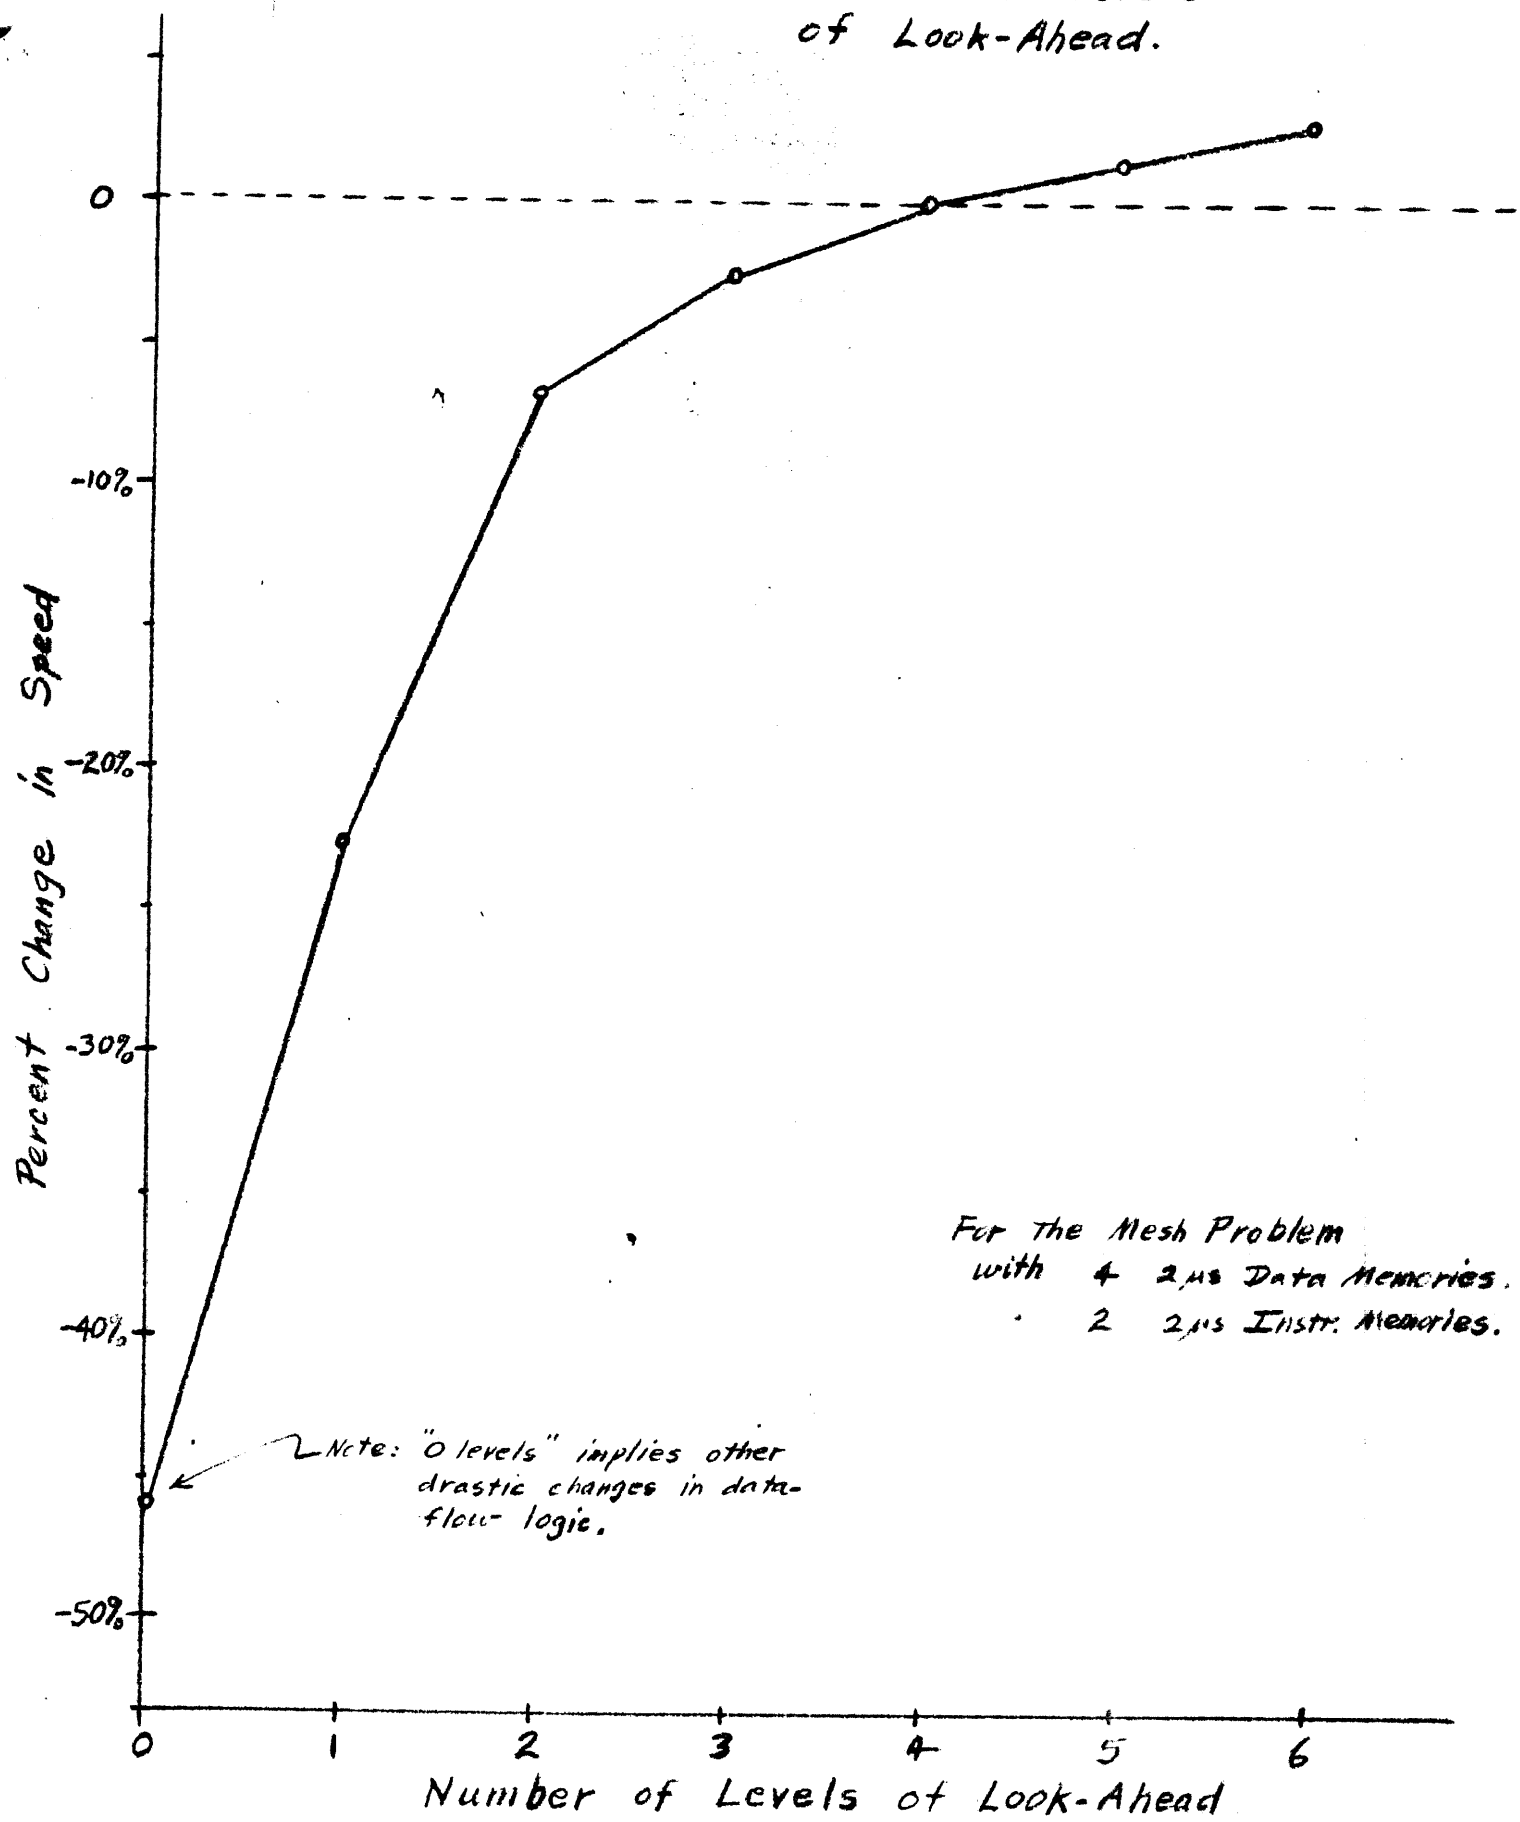

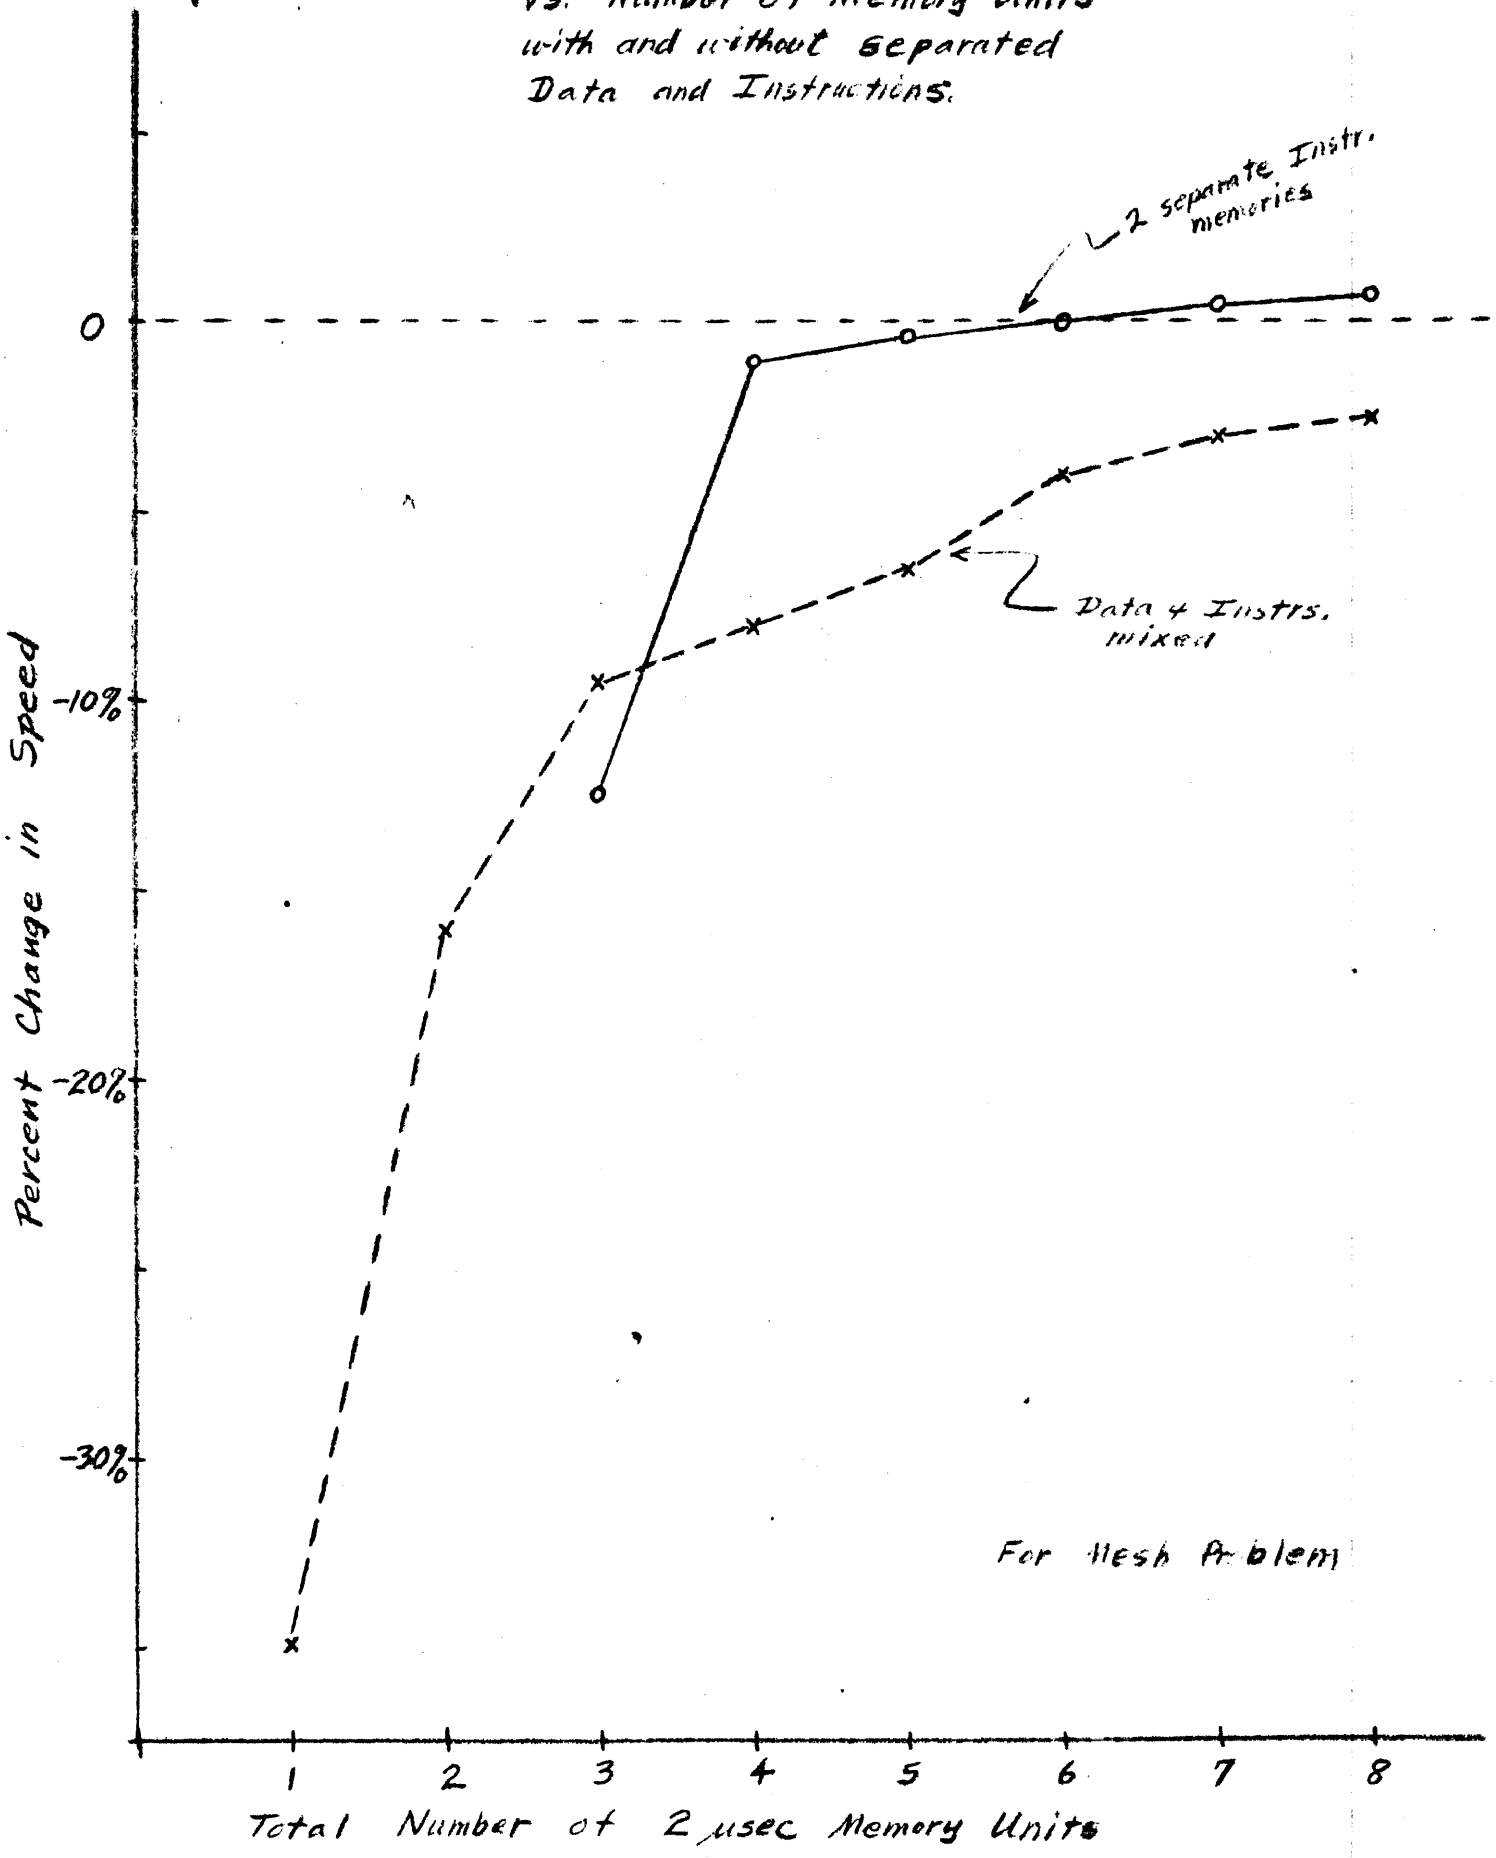

GRAPH I.

# STRETCH: Speed of Internal Computation vs. Number of Levels of Look-Ahead.

(Mesh Pro

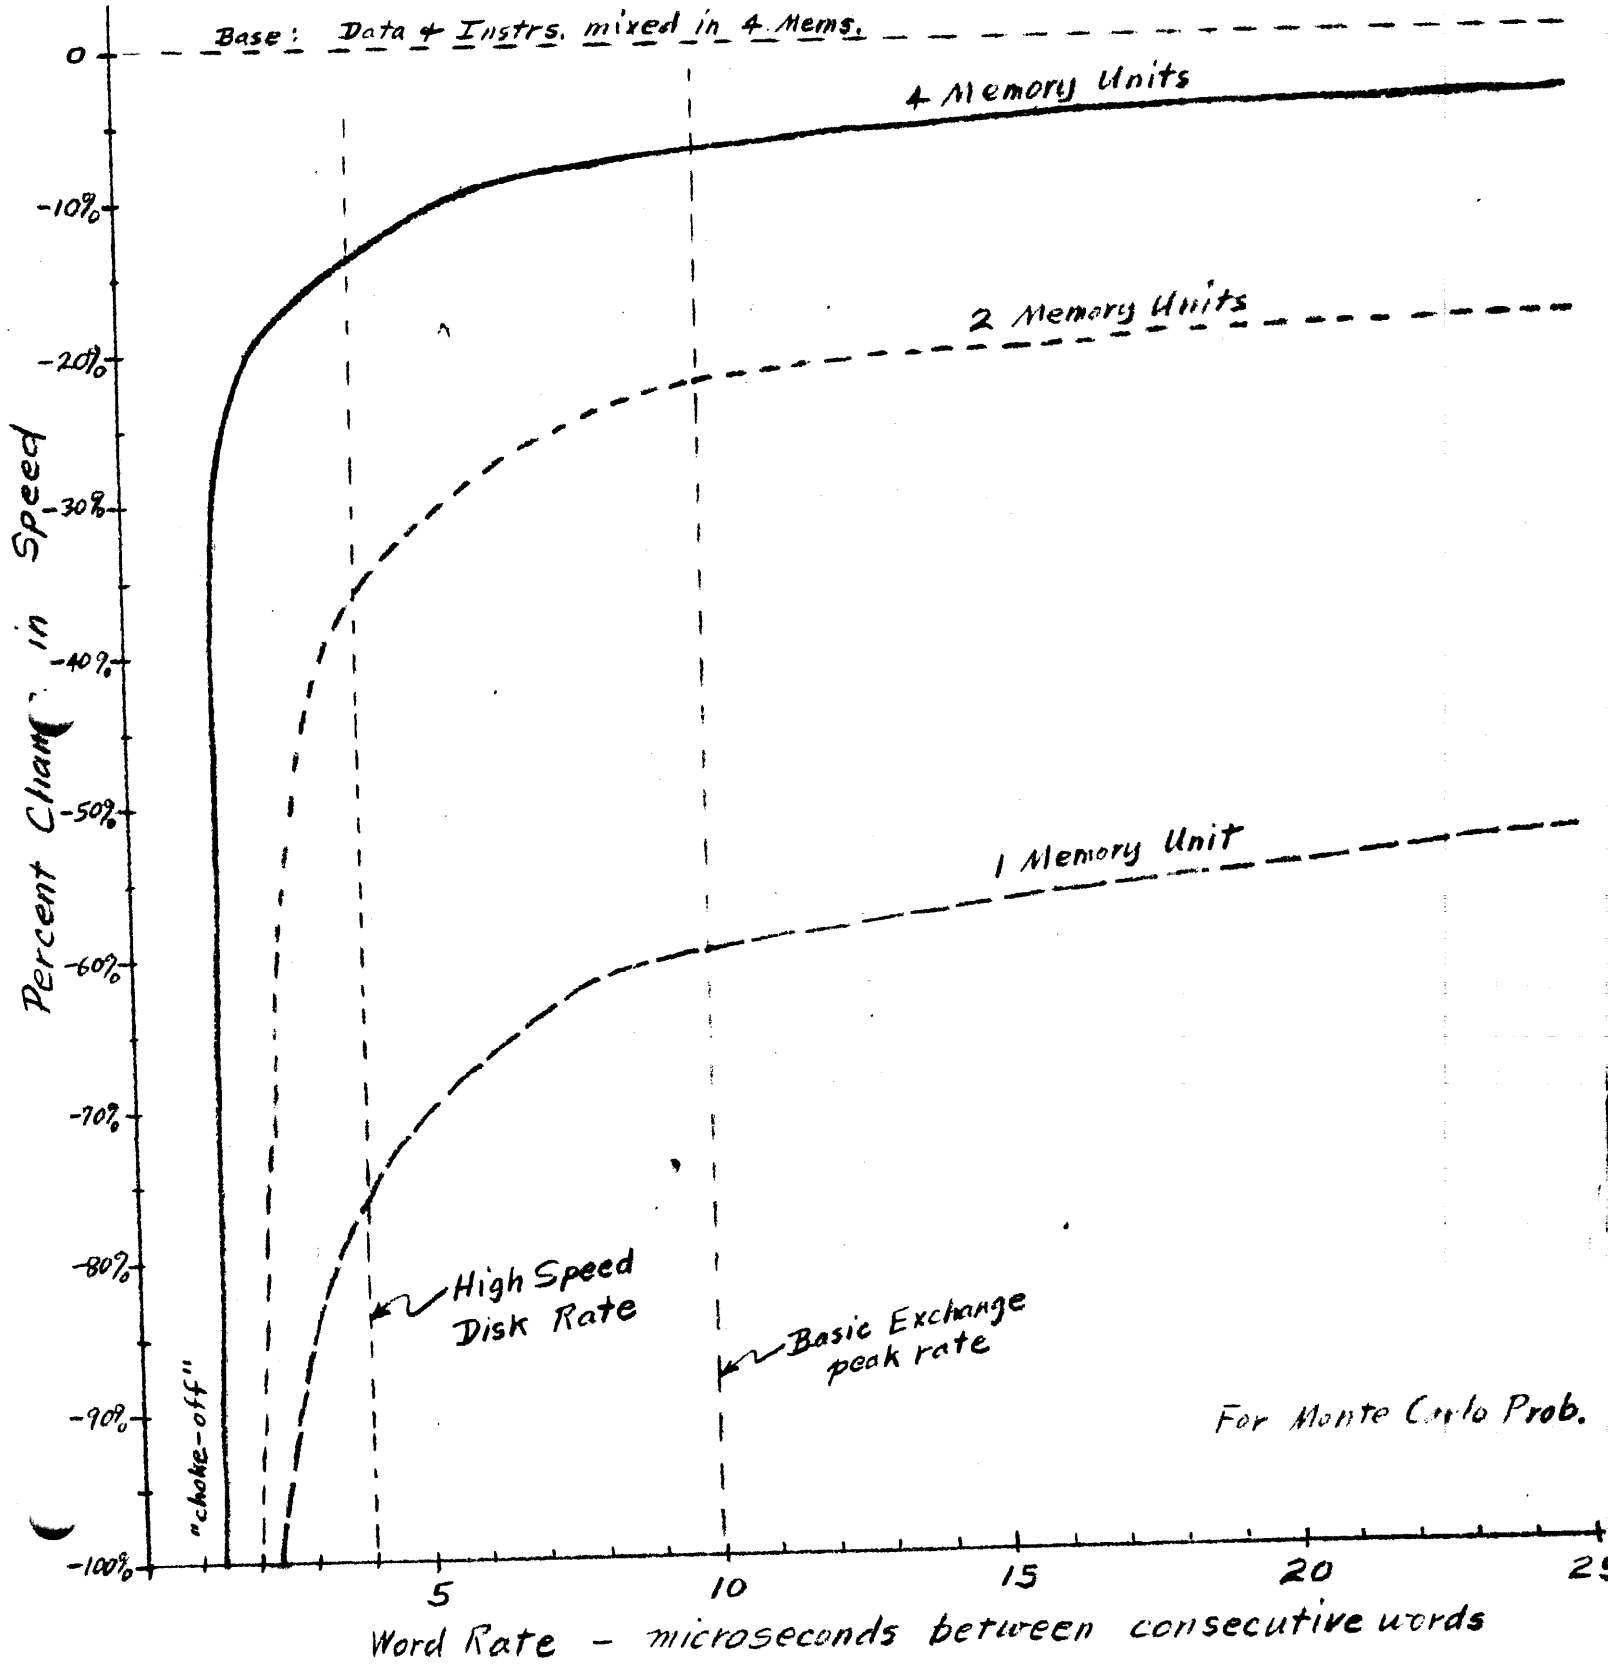

Graph II STRETCH: Speed of Internal Computation vs. Number of Memory Units with and without separated Data and Instructions. (Mesh Prob.)

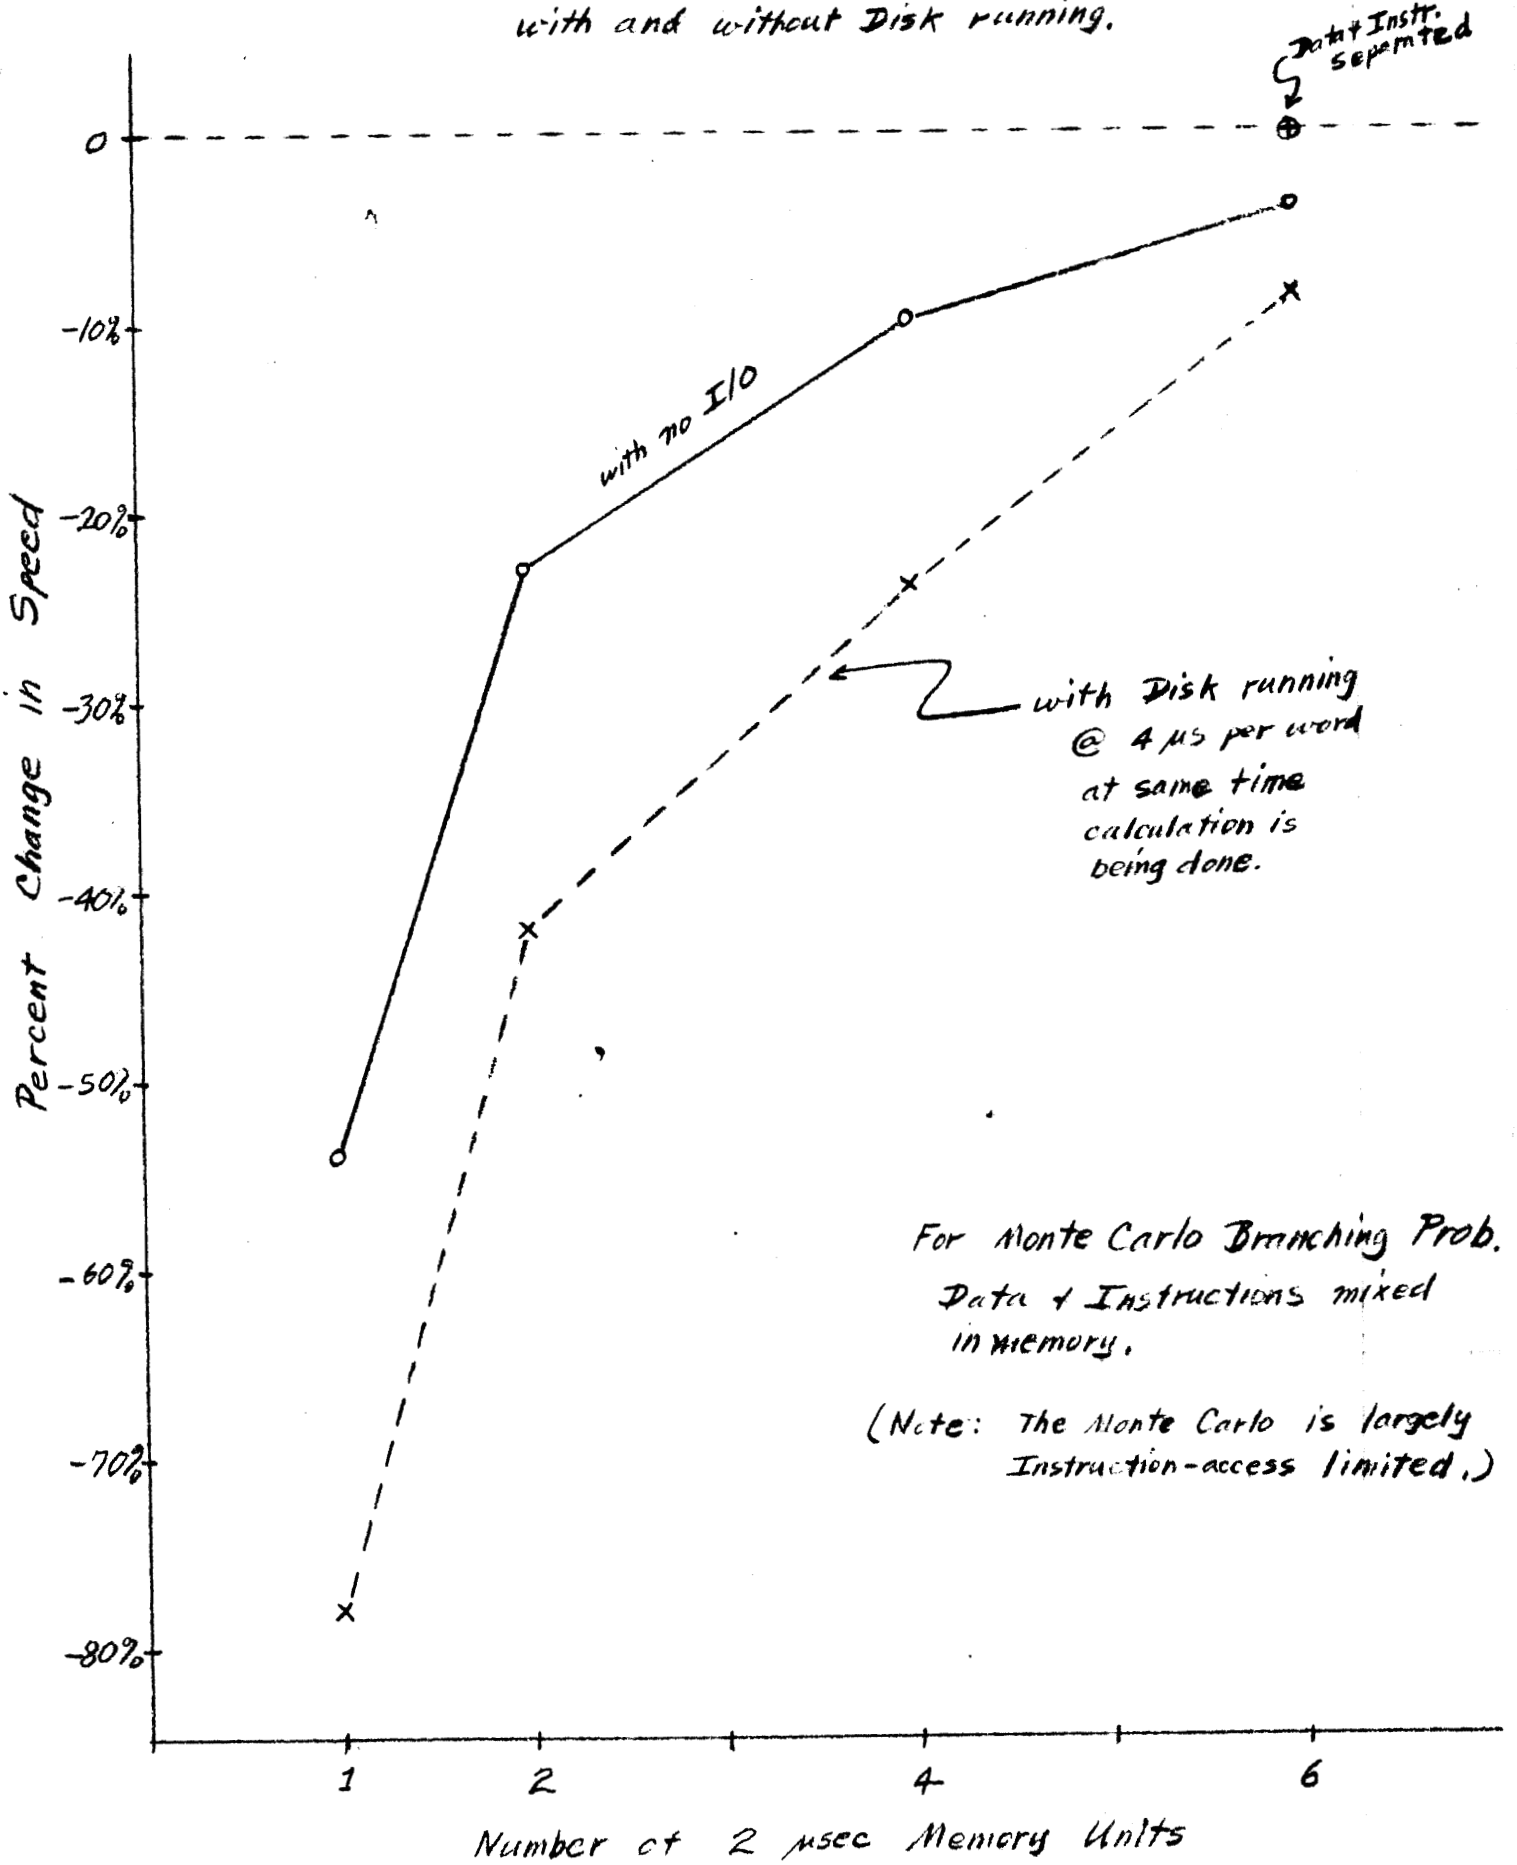

HGK Apr 3, '59

STRETCH: Internal Computing Speed. (Monte Carlo)
Percentage Reduction in Speed caused by Input-Output devices referencing memory at different rates while the calculation is proceeding.

HBK Apr 3, 5

STRETCH: Speed of Internal Computation vs. Number of Memory Units with and without Disk running. (Monte Carlo)

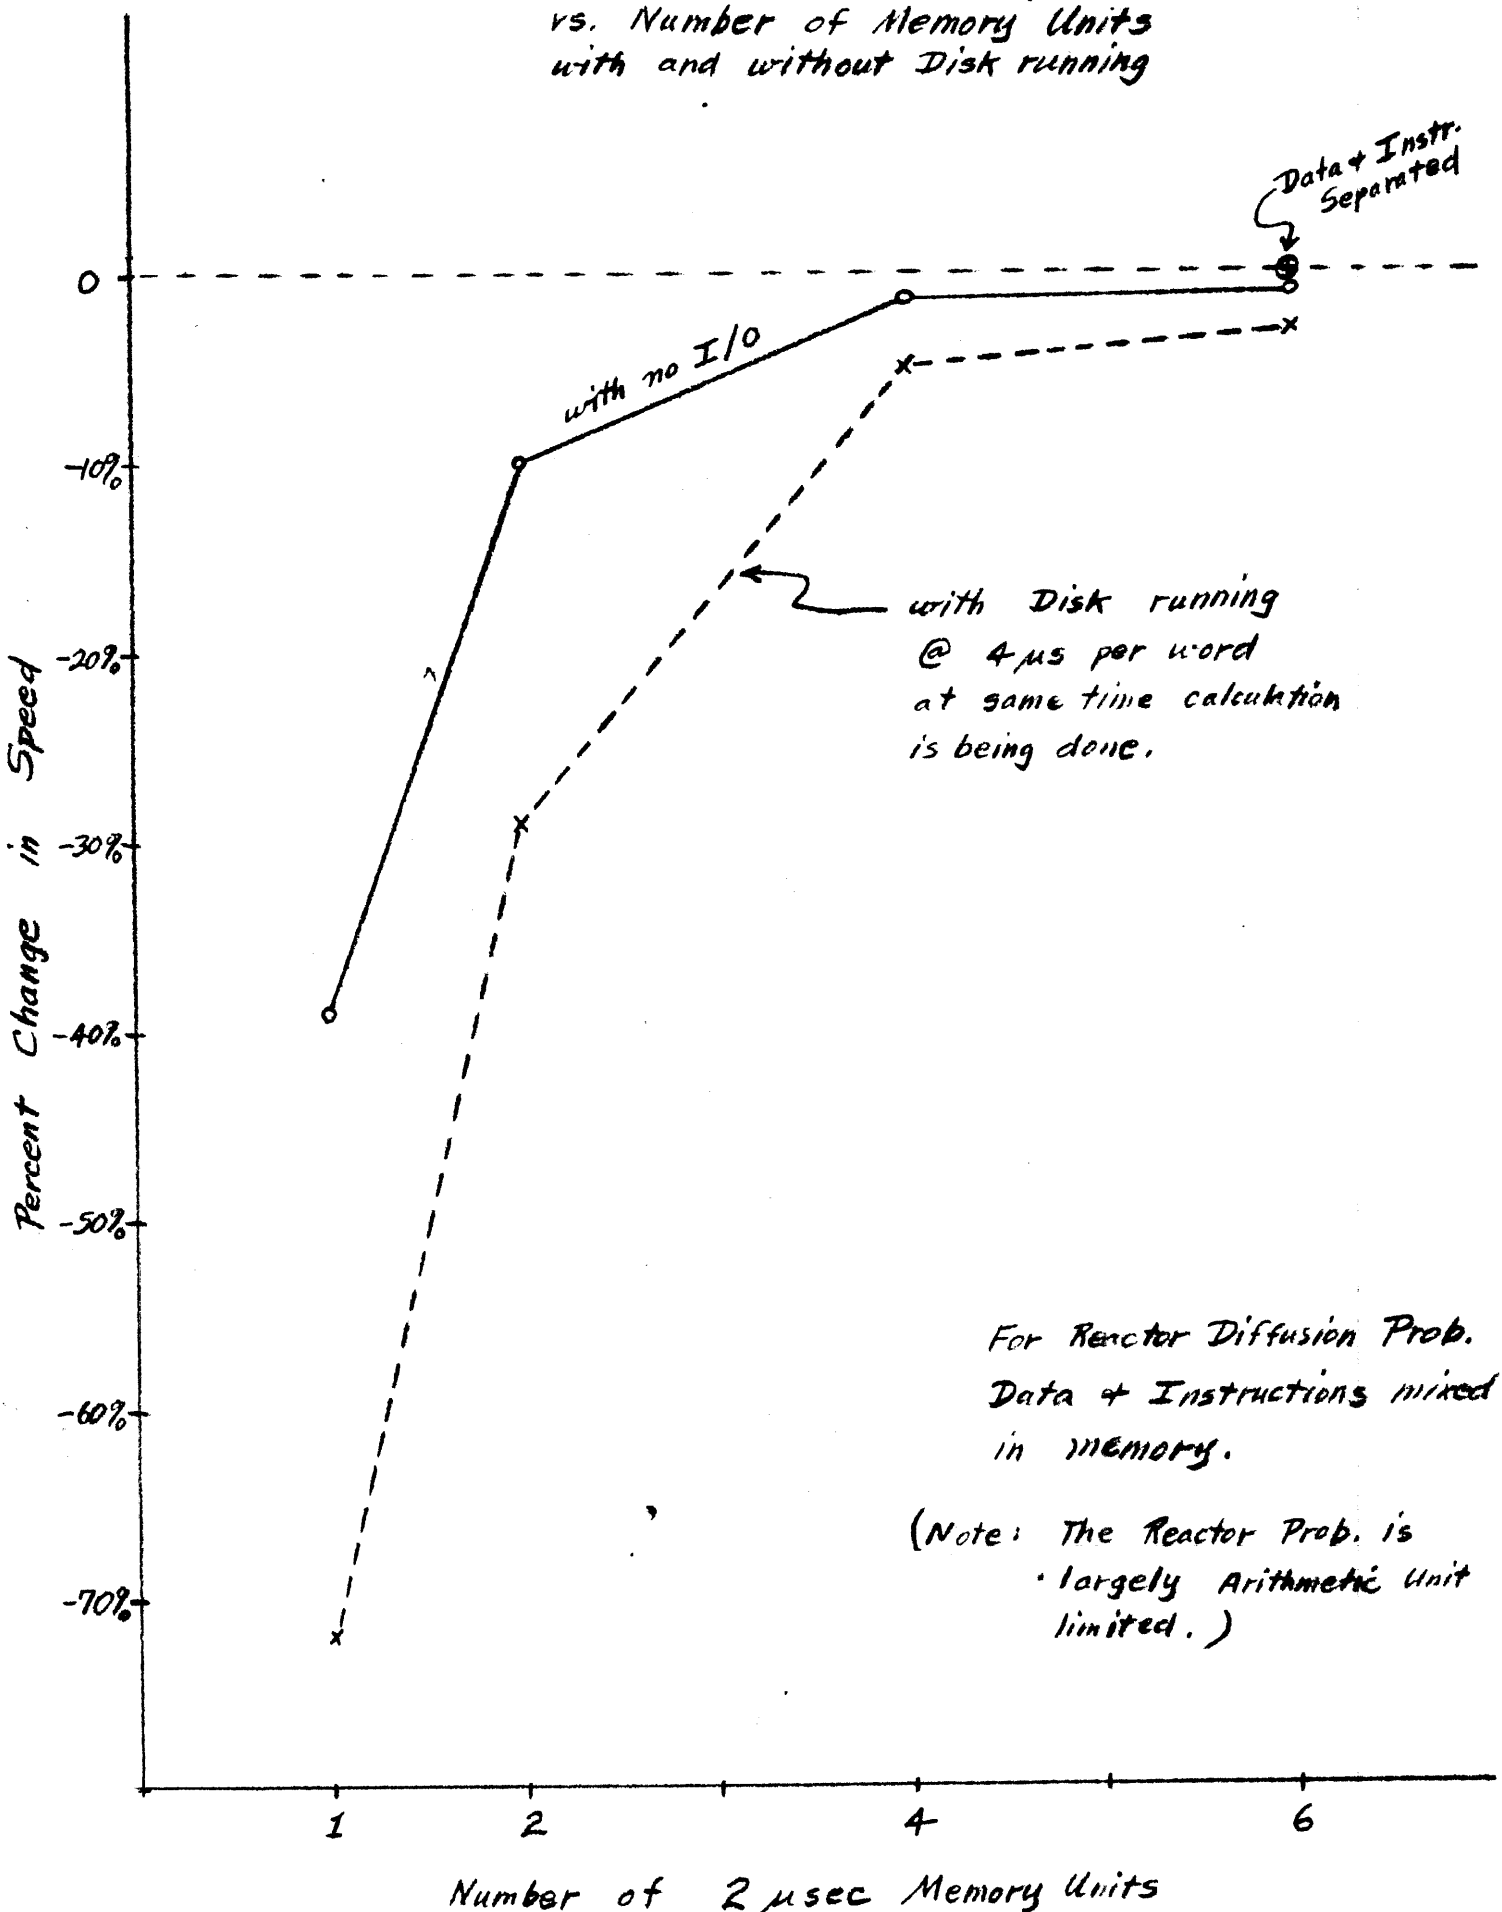

For Monte Carlo Branching Prob.
Data + Instructions mixed in memory.

(Note: The Monte Carlo is largely Instruction-access limited.)

HGK APR 3,59

STRETCH: Speed of Internal Computation (Reactor Prob.)
vs. Number of Memory Units
with and without Disk running

For Reactor Diffusion Prob. Data + Instructions mixed in memory.

(Note: The Reactor Prob. is largely Arithmetic Unit limited.)
