Virtual Memory

I. Background

Refer to asynch. & overlapping

- speed in AU's can go up but mems can't.

Brooks - Amdahl

Griffith - Cocke

II. Difficulties: overlapping — partially executed instructions

1. must remove overlapping on interruption.
2. must not introduce coding restrictions — [illegible]
3. the amount of lookahead must be determined from needs not arbitrarily.
4. Wrong way branches.
5. Comparison on multiple fetches of same data.
6. Different Memory Types.

III. Instruction Types

1. Fetch of instructions
2. Store Instructions "Pseudo" stores
3. Instr. not involving memory.
