December 11, 1959

To: 1959 EJCC Authors

Since the Publications Committee has no further need for the question cards submitted during the 1959 Eastern Joint Computer Conference, we are returning them to you to do with as you see fit.

I have only two suggestions in this connection. One, the cards can serve as a useful guide in determining what supplementary information, if any, might be incorporated in future presentations of your particular subject and what kinds of questions you are likely to be asked. Two, since it will be impossible to include in the "Proceedings" any of the questions which were not actually answered during the Conference sessions, you may want to correspond directly with some of those people whose questions went unanswered.

Thanks again for the speed and good humor with which you are carrying out your part in the project of publishing the "Proceedings."

John L. Atwood

QUESTION CARD

Question Directed to: Kolsky

Question: What happens to the look-ahead process if a sequence of branch instructions is programmed, such as in the binary selection of one of many subroutines. An example is the selection of the desired piece of a piece-wise function approximation.

Questioner:

Name Rubinoff

Company Moore School, U of Pa.

1959
Eastern Joint
Computer Conference

QUESTION CARD

Question Directed to: Dr. H. G. Kolsky

Question:

Do you plan on having any instructions that would help 'look ahead operation' of the virtual memory for specially difficult problems?

Questioner:

Name M. T. Tayyabkhan

Company Union Carbide Corporation

1959
Eastern Joint
Computer Conference

QUESTION CARD

Question Directed to: Kolsky

Question:

Is the Virtual Memory addressable in case of a branch

Questioner:

Name Robert T MacIntyre

Company Bonnech + Lamb

1959
Eastern Joint
Computer Conference

QUESTION CARD

Question Directed to: Kolsky

Question:

Is the addressing of Stretch's main memory sequential within a memory unit or sequential across several memory units.

Questioner:

Name JAMES ANDERSON

Company Burroughs Corp.

1959
Eastern Joint
Computer Conference

QUESTION CARD

Question Directed to: KOLSKY

Question: DISCUSS MAINTANCE on DIAGNOSTIC PROGRAMS TO INSURE PROPER OPERATION OF VIRTUAL MEMORY

Questioner: MARVIN S. MAXWELL
Name U. S. Naval Weapons Laboratory
Company Dahlgren, Virginia

1959
Eastern Joint
Computer Conference

QUESTION CARD

Question Directed to: Kolsky

Question:
In view of the fact that a factor of 2 in speed is gained by use of the virtual memory, what percentage of the cost of computer (neglecting input-output devices) is attributable to the look-ahead?

Questioner: K. Enslein
Name
Company Brooks Research Inc

1959
Eastern Joint
Computer Conference

QUESTION CARD

Question Directed to: Kolsky

Question:

Please discuss the "Mesh Prob" used for Simulator Study

Questioner:
Name F. VERZUH
Company MIT

1959
Eastern Joint
Computer Conference

QUESTION CARD

Question Directed to: Kolsky

Question:

How many transistors are there in the Virtual Memory

Questioner:
Name Ben Gurley
Company digital Equipt Corp
