(Brooks)

Scheme:

No immediate index modif. w >19 bits → div index mod gets 1 more bit

All index mod. instr. are indexable and take 1/2 wd.
Four bit index addr.
All inded modif. values are full wd → direct indexi mod. gets a 2nd bit.
All present direct index mod. ops.

New index mod. ops.

15	8	13	1	load L/R II from R(A)/L(A)	9.	Incr. II by C(A) & Ct/not	C
16	17	14	2	Store L/R II at R(A)/L(A)	10.	Incr. C(A) & compare	L
		19	3	Comp L II w L(A)/R(A)	11.	Comp II & Reset	R
		20	4	Add	12.	Ct & Br. C(A) & Reset	R
		21	S	Sub			
		18		Incr & Br to C(A) ▷ (32 max can be done)			

In MISC. format

Load	I L	immed.	(A)
	IR	"	(A)
Add	IL	"	A
	IR	"	A
Sub	IL	"	A
	R	"	
Comp	IL	"	A
	R	"	

All ops with sign mod. 6. 91%

Other { 8. 4% Static; 7. 3 dyn.; 2. 5 time }
