# Product Planning Dept. Meeting

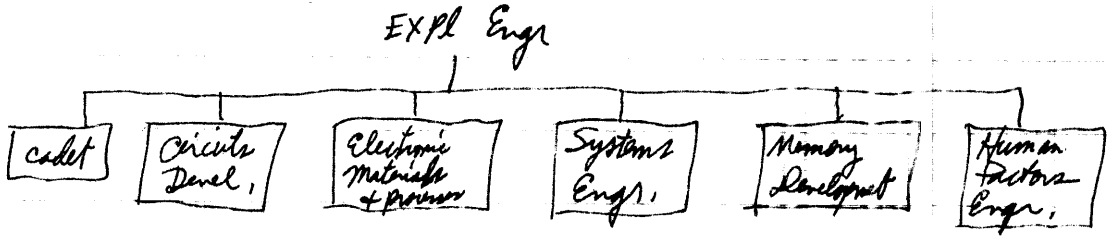

Joe Logue: Exploratory Engineering — March 2, 1959

1. Purpose: to shorten time between conception of idea & its implementation,

2. Mode of operation: 4 areas,

use iterative process.

Plated bit memory - low cost, - W. Winger (in Elec. materials + mem. devel.)

Read only memory, - - Joe Criss

Mg-Bi thin films - uses Kerr effect - optical detection, - how to be used?

evaporation techniques -

mem. devel. - P. Fox Vernon Wolf - core logic is put in here also.

Human factors - displays are being examined now - OAL prob.

computer processing - info. retrieval, - old + new info.

What types of equipment is needed? - do we have to tailor-make?

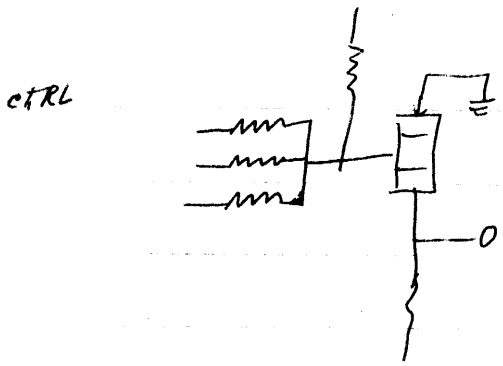

- Electronic Editor - (electric eye gun) - more info around

- scientific data presentations - not known what is wanted?

3-D presentation, 3 color? - alpha-numerical,

Circuit devel - future machines - larger pieces - printed circuits, etc.

CTRL

biased off.

$3^{00}$ cents compared to 3 or 4 ¢ for mem bits

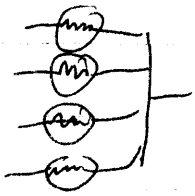

logic ~ 100 X more expensive per bit.
Than memory bit

If logic + mem were to cost the same —

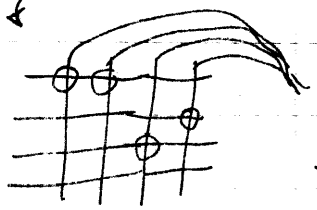

- change organization of machine by electronic means.

Example: replace resistor by photo-conductor.

ELPC circuits,

illuminate certain ones only, with mask — like plugboard.

Ignition points - built in sequences — get sequencing control to deny certain combinations,

"combination lock prob."

1 or 2 mμs per stage of logic
transmission to next stage can be several times longer

modular construction.

---

cost goal 1¢ per interaction in such arrays - if "bit head" by production.

are now laying out 024 using this technique.

---

learning machine - self organizing - ? - maybe in future.

- may layout on one block of germanium, - replace a digit wheel in a gear machine.

- parts handling : ref. supermarket, "self service" report.

- ~~film~~ can - read magnetically written. -- transport thru tubes etc.

- Transistors - are expensive - & not tested & - often have to give higher quality than needed.

Trs could be handled & recorded on package magnetically?

Micro program - machine.

associative memories

---

Lack of Area Manager Type - to pick up ideas generated here. - should pick up concepts in this area. --- Tech. Planning Committee ---

Swanson - Endicott } similar to Logue's group
Bennett - San Jose } ESPC came from here

Wally Bolton in Wh. Pl. - coordinates Adv. Technology.

---
